

## 25th March 2020 Update - Coronavirus [COVID-19]

As the COVID-19 virus continues to spread, first and foremost our thoughts remain with those affected.

As previously stated, IKO has been following Government and Public Health England guidance, and has taken all appropriate measures to protect our staff, suppliers and customers.

Yesterday, we suspended production at our Appley Bridge site, where our bitumen membranes are produced. We have stock of many items in our range, and orders can be processed and dispatched, subject to availability. Please consider that we are operating with a skeleton staff and that not all orders will be fulfilled. We appreciate your understanding during this period.

Today, we will also be suspending production at our single ply factory in Chesterfield. Again, a skeleton staff will be operating and is able to process and dispatch orders subject to availability and capacity restrictions.

We will continue to monitor the situation at our other facilities, and will advise of any further action as and when required.

Many thanks for your continued understanding and support.

Anthony Carlyle  
Group Managing Director
